

*It's true, Sweet Peet is "The Best Mulch On Earth", yet that's only 25% of the reason why tens of thousands of customers purchase Sweet Peet each year.*

*The other 75% of Sweet Peet's unmatched value is widely recognized as:*

- 1** A composted agricultural manure that beautifies all plantings, nurturing root systems for healthier, vigorous plants.
- 2** A soil conditioner that "Nourishes" vegetable gardens, fruit trees, all plants! It buffers acid and alkaline soils by helping to maintain the gardening sweet spot.
- 3** Sweet Peet protects trees, shrubs and gardens! It increases the soil microbial population, leading to the suppression of a variety of soil borne diseases.
- 4** Sweet peet saves up to 50% of water used on all plantings, retaining and slowly releasing water during dry weather conditions vs other mulches with little to none.
- 5** Sweet Peet transforms itself into humus, "Mother Nature's natural plant food, promoting growth!"
